## TASC Garners Decision Analysis Best-Practice Award

**Colorado Springs, CO** – The INFORMS Decision Analysis Society has awarded TASC's enterprise analysis team the annual Best Practice Award for its Decision Support Analysis System (DSAS). The society promotes the development and use of tools and methods to improve decision-making in both government and private enterprise.

"Our goal is to help our customers make smart decisions that balance efficiency, productivity and their mission objectives," says John Tindle, senior decision analyst at TASC. "The analytical capability we engineered has evolved continuously over the last decade to be tailored to different types of applications, such as engineering, budgeting and strategic planning."

TASC's DSAS capability utilizes integrated data sharing, integrated analytical tools and methods and integrated decision displays. It employs a diverse suite of operations research methods in utility, network and decision analysis, and can support efforts in any mission or functional area.
